Business Central Progress Update

Gap analysis and next steps
— prepared for Morre

VERSION	1.0
DATE	July 2026
CLASSIFICATION	Internal
AUTHOR	Chris Mansson / Tentixo AB

From: Chris · **Date:** 2026-07-05 **Purpose:** quick read on where I am with Business Central, self-assessed against the MB-800 map, plus next steps and a few things I need from you.

Where I am, in one line

Solid on the **architecture / financials** side (your conventions, posting groups, CoA, VAT), thinner on **daily operations** (journals, payments, inventory). I'm now shifting from reading/listening to **hands-on in the Test environment** — that's the gap that only closes by doing.

Gap analysis at a glance (MB-800 domains)

DOMAIN (EXAM WEIGHT)	SELF-RATING	WHERE IT STANDS
Set up BC (20–25%)	 Partial	Config packages + number series solid. Gaps: security/permissions , assisted setup, approvals. Dimensions now partial (see below).
Configure financials (25–30%)	 Strongest	Posting groups, CoA, VAT, semantic groups = comfortable. Fixed Assets now partial (was a full gap). Still thin: bank/AP journals.
Sales & purchasing (10–15%)	 Partial	Sales/customer side OK; item types + posting setup reinforced. Vendor/purchasing side is weakest.
Perform BC operations (30–35%)	 Partial	Sales invoicing solid. Biggest gaps: journals & payments (bank rec, applying entries), inventory transactions , FA transactions (now partial).

What moved recently — and why

The IFRS-16 / intercompany work with Lasernet (Carla, Camilla) has been an unexpectedly strong classroom. Three gaps improved just by working through it:

- **Fixed Assets**   → — FA classes, depreciation books, FA posting groups, Calculate Depreciation, FA G/L journals (from watching you build the lease setup).
- **Dimensions**   → — default dimensions on items, IC dimension mapping, dimensions flowing with lines, Country-code correction on receipt. (Note: I know your "never use dimensions" stance — the IC work *does* use them, so I've had real exposure.)

- **Item types + General/VAT Posting Setup** — the "five tags" resolving accounts by posting type, reinforced by the IC item-method setup.

The caveat I'm honest about: most of this was **watching you do it**. It only counts as "learned" once I've done it myself — which is the next step.

Next steps

1. **Fixed Assets, hands-on in Test** — a vanilla asset lifecycle (acquire → depreciate → **dispose**), then the real Lasernet lease dry-run (engagement action A5). Converts FA from "seen it" to "done it", and covers disposal (which the lease never teaches). *Exercise sheet is written and ready*.
 2. **Journals & payments** — the heaviest exam gap and the most useful operationally (payment/cash-receipt journals, applying entries, bank reconciliation). Next hands-on block after FA.
 3. **MB-800** — re-map against the updated study guide (refreshed June 30), fill remaining  s (security, inventory transactions), target the exam **Q4 2026**.
-

Where I need you

1. **Test environment**: OK for me to create my own FA class + depreciation book in Test, or should I reuse existing ones? (Prefixing mine **CTEST-** either way.)
 2. **Lease A5**: when I reach it, let's pair on the **deferral push-back** (mid-lease catch-up) — you flagged that part isn't built yet.
 3. **Two WIP loose ends still open from Call 6** whenever convenient: the **J-GRP-OTHR** wiring (G/L Expense = 3426, looks like it should be 3436), and adding **8940 Deferred tax** to the CoA for consolidation.
-

Learning is captured continuously in the BC repo — happy to walk you through any of it.
